ABOUT

Computer Programming and Analysis graduate heading to York University for Computer Science in Fall 2026. I've built backend systems, microservices, mobile apps, and full-stack projects. I focus on seeing projects through to completion and getting the details right.

EDUCATION

Advanced Diploma in Computer Programming and Analysis (T177)

George Brown College, Toronto, ON | Graduated 2026

GPA: 3.5/4.0

TECHNICAL SKILLS

Languages: Java, Kotlin, C#, Python, JavaScript/TypeScript, PHP, SQL

Backend: Spring Boot, Spring Cloud Gateway, Node.js, Express, FastAPI, Laravel, REST APIs, JWT, Keycloak

Mobile: Android (Kotlin, Jetpack Compose, Room, MVVM)

Frontend: React, Vue.js, TypeScript

Infrastructure: Docker, Kafka, Resilience4j, PostgreSQL, MongoDB

Tools: Git, GitHub, Docker, Jenkins, Travis CI

PROJECTS

Study Buddy (Capstone Project)

Spring Boot, Python, Docker, PostgreSQL, JWT

Built an AI study assistant platform with Spring Boot backend and JWT authentication. Integrated machine learning components using Python and scikit-learn. Containerized all services with Docker for deployment. Implemented secure APIs for frontend and mobile clients.

Microservices System

Java, Spring Boot, Spring Cloud Gateway, Kafka, Docker

Developed distributed backend using Spring Cloud Gateway for centralized routing. Implemented Kafka messaging for asynchronous communication between services. Added Resilience4j circuit breakers for fault tolerance. Designed service-to-service communication and API boundaries.

Full-Stack Web Application

React, Node.js, Express, MongoDB, TypeScript

Built complete web application with React frontend and Node.js/Express backend. Implemented authentication system with protected routes. Integrated MongoDB for data persistence. Designed RESTful APIs and handled state management on the frontend.

Android Restaurant Guide

Kotlin, Jetpack Compose, Room, MVVM

Developed Android application using Kotlin and Jetpack Compose. Implemented Room database for offline-first data storage. Applied MVVM architecture for clean separation of concerns. Built modern UI with Compose and handled complex state management.

ADDITIONAL PROJECTS

PersonalRestaurantGuide / *Kotlin, Jetpack Compose, Room*

Restaurant discovery app with offline-first architecture. Built modern UI using Jetpack Compose, implemented local database with Room, applied MVVM pattern for maintainable code structure.

Design Patterns Implementation / *C#, .NET*

Implemented Observer and Iterator design patterns from scratch in C#. Demonstrated clean architecture with proper encapsulation, interfaces, and separation of concerns.

Gomoku Game / *Java*

Two-player strategy game with clean Java implementation. Built game state management, win condition detection, and structured board game logic.

JavaFX Employee Manager / *Java, JavaFX*

Desktop application for employee management with JavaFX interface. Implemented CRUD operations with clean separation between UI and business logic.

TECHNICAL EXPERIENCE

- Containerized multi-service applications with Docker Compose
- Built authentication systems with JWT and Keycloak
- Designed RESTful APIs for web and mobile clients
- Set up CI/CD pipelines with Jenkins and Travis CI
- Implemented async messaging with Kafka between services
- Worked with version control, code reviews, and Agile development
